

## SipSmart Sugar Content Wheel - Set-up guidelines

### 1. Set up the stand

Loosen the red tab and slide the legs apart to form a tripod - Note: for extra stability, it is better if the 3 legs and the centre post touch the ground. Tighten the red tab.

Loosen the lower screw on the rod and extend the rod - just the one is required - the heavier rod will give that extra support. Tighten the screw.

If applicable, remove the brass alternate cap on top. (This cap is not needed)

### 2. The wheel - pick it up by the centre grip on the back of the wheel

You will see a silver pin/button on the grip.

You will also see a hole on the bottom of the grip, with a tightening screw beside it. Make sure the screw is open and doesn't block the hole.

Raise the wheel and put the tip of the rod in the hole, you will need to push the pin/button so the rod will lock into place.

While making minor adjustments to the position of the wheel, tighten the screw to lock the wheel in place.

That's it - it's ready to use.

*The wheel was designed to be transportable - over time the grip may need to be tightened to the centre screw.*
